

World of Warcraft Game Data APIs

The World of Warcraft game data APIs encompass both static and dynamic game data. For more information about static and dynamic game data, see [World of Warcraft Namespaces](#).

Host Names

For all regions except China, the API host name follows the format `{region}.api.blizzard.com`, where `{region}` is one of `us` | `eu` | `kr` | `tw`. For China, the host name is `gateway.battlenet.com.cn`. For more information, see [Regionality and APIs](#).

Namespaces

The World of Warcraft game data APIs

require a namespace as part of every request. Each endpoint below lists the correct namespace to use as a parameter. A namespace can be submitted as a header (`Battlenet-Namespace: {namespace}`) or as a query parameter (`?namespace={namespace}`). For more information, see [World of Warcraft Namespaces](#).

Search

Certain data types in the World of Warcraft game data APIs support search. See [Search](#) for more information.

APIs

World of Warcraft supports the following game data APIs. For information about using the APIs, see [Getting Started](#).

Achievement API

[Collapse All](#)

GET

Achievement Categories Index

</data/wow/achievement-category/index>

Returns an index of achievement categories.

Parameter	Type	Value	Description
:region	string <i>REQUIRED</i>	<input type="text" value="us"/>	The region of the data to retrieve.
namespace	string <i>REQUIRED</i>	<input type="text" value="static-us"/>	The namespace to use to locate this document.
locale	string	<input type="text" value="en_US"/>	The locale to reflect in localized data.

GET

Achievements Index

/data/wow/achievement/index

^

Returns an index of achievements.

Parameter	Type	Value	Description
:region	string <i>REQUIRED</i>	us	The region of the data to retrieve.
namespace	string <i>REQUIRED</i>	static-us	The namespace to use to locate this document.
locale	string	en_US	The locale to reflect in localized data.

[Try It](#)[Clear Results](#)[Clear OAuth Token](#)[GET](#)

Achievement

/data/wow/achievement/{achievementId}

Returns an achievement by ID.

Parameter	Type	Value	Description
:region	string <i>REQUIRED</i>	us	The region of the data to retrieve.
{achievementId}	integer <i>REQUIRED</i>	6	The ID of the achievement.
namespace	string <i>REQUIRED</i>	static-us	The namespace to use to locate this document.
locale	string	en_US	The locale to reflect in localized data.

[Try It](#)[Clear Results](#)[Clear OAuth Token](#)[GET](#)

Achievement Media

/data/wow/media/achievement/{achievementId}

Returns media for an achievement by ID.

Parameter	Type	Value	Description
:region	string <i>REQUIRED</i>	us	The region of the data to retrieve.
{achievementId}	integer <i>REQUIRED</i>	6	The ID of the achievement.
namespace	string <i>REQUIRED</i>	static-us	The namespace to use to locate this document.
locale	string	en_US	The locale to reflect in localized data.
Try It			Clear Results Clear OAuth Token

Auction House API

[Collapse All](#)[GET](#)

Auctions

/data/wow/connected-realm/{connectedRealmId}/auctions

Returns all active auctions for a connected realm.

See the **Connected Realm API** for information about retrieving a list of connected realm IDs.

Auction house data updates at a set interval. The value was initially set at 1 hour; however, it might change over time without notice.

Depending on the number of active auctions on the specified connected realm, the response from this endpoint may be rather large, sometimes exceeding 10 MB.

Parameter	Type	Value	Description
:region	string <i>REQUIRED</i>	us	The region of the data to retrieve.
{connectedRealmId}	integer <i>REQUIRED</i>	1146	The ID of the connected realm.
Try It			Clear Results Clear OAuth Token

Parameter	Type	Value	Description
namespace	string <i>REQUIRED</i>	<input type="text" value="dynamic-us"/>	The namespace to use to locate this document.
locale	string	<input type="text" value="en_US"/>	The locale to reflect in localized data.
Try It			Clear Results Clear OAuth Token

Azerite Essence API

Collapse All

GET

Azerite Essences Index
`/data/wow/azerite-essence/index`

^

Returns an index of azerite essences.

Parameter	Type	Value	Description
:region	string <i>REQUIRED</i>	<input type="text" value="us"/>	The region of the data to retrieve.
namespace	string <i>REQUIRED</i>	<input type="text" value="static-us"/>	The namespace to use to locate this document.
locale	string	<input type="text" value="en_US"/>	The locale to reflect in localized data.
